Cerner PowerChart Ambulatory Solution

PowerChart is the solution used to access the patient's electronic medical record. PowerChart is highly interactive and designed to address the needs of patient care by providers and medical staff. It streamlines the workflow process into one desktop application, which provides access to the functions that support the electronic medical record. Since PowerChart is the basis of the patient's electronic medical record, you will use it to enter orders, to document on computerized forms, and for other various tasks.

Subjects covered in this session include:

Documentation

Documentation offers readily available access to documentation by providing easy navigation and quick access to patient data. Documentation entered into the system, by any valid means, is instantly available to all providers and medical staff who have privileges to view documents.

Let's get started!

User name:

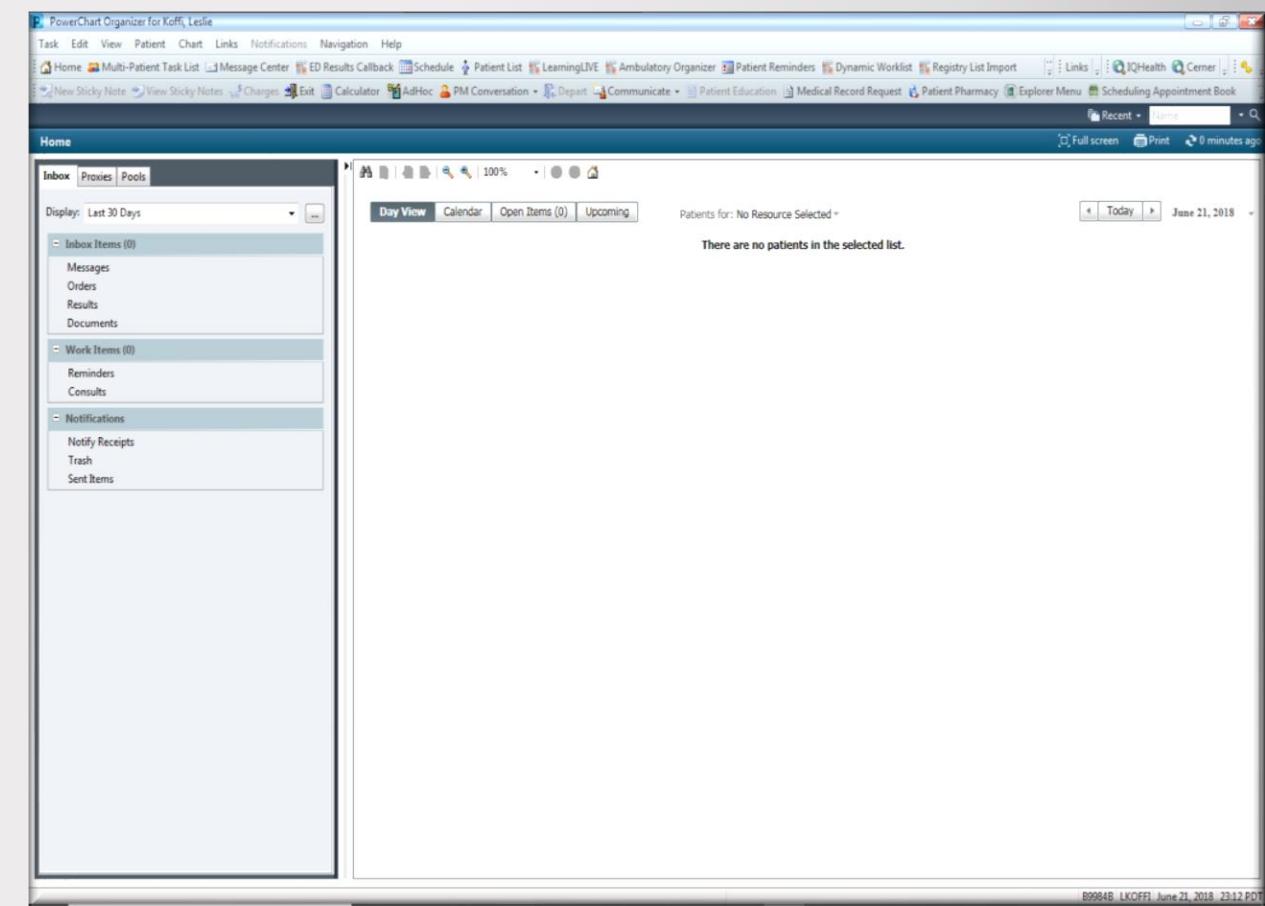

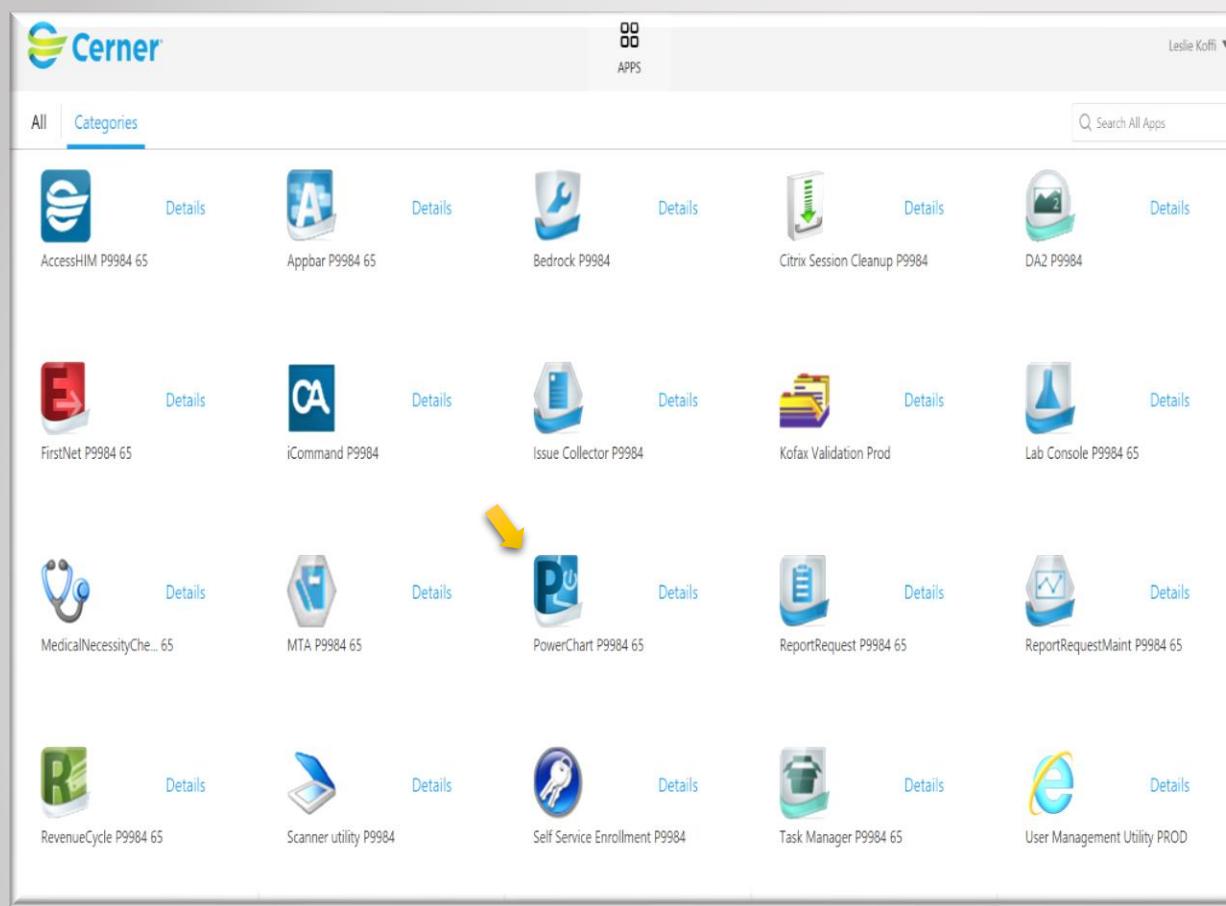

Password:

Domain:

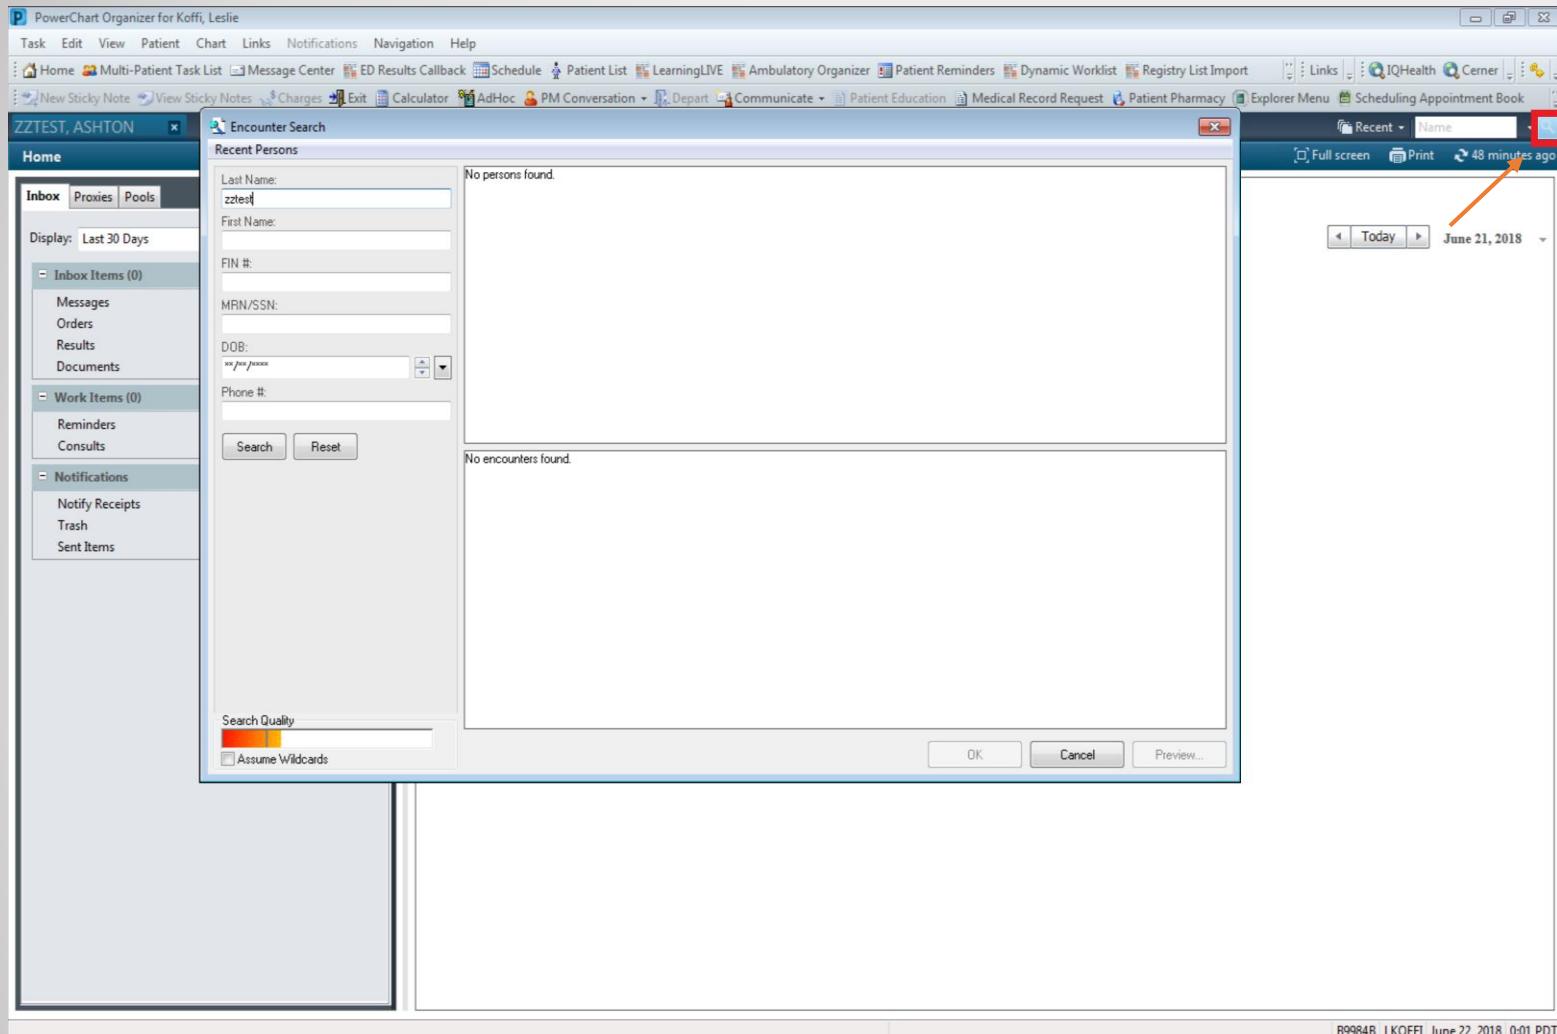

[Account Self-Service](#)

©2018, CernerWorks - Access restricted to authorized users.

First, you must login to your Citrix
account.

Next, locate and launch the PowerChart application.

Patient Search

After clicking the search icon, the patient search option will appear. Type the patient's name and choose the correct encounter then click OK.

Advanced filters

In order to adjust/customize your display filters for **List**, launch the **Advanced Filter Dialogue**.

Advanced Filters

These **Advanced Note Filters** allow for a more customized view to the user's preference. Note that these changes will be adjusted for all of your assigned patients so you must be very diligent in choosing what filters would work best of all of your patients collectively. Once filters are selected, click **Apply** then **Save**.

Dynamic Documentation

Dynamic Documentation, or DynDoc for short, is the most current and efficient way to create patient notes in the Cerner Millennium.

Note Template

When choosing a Note Template, we must first select the note type.

Note: Depending on what role you are assigned i.e. Provider or Nurse, your options will be adjusted according to your role.

DynDoc

DynDoc allows you to combine the structured data elements of the medical record i.e chief complaint, med list, allergy list, problem list, etc. and it would come from the patients current encounter aspects of the note, like the HPI, ROS, physical exam, and assessment/plan, in a way that looks less like the point-and-click medical note used in PowerNote for example.

PowerNote

PowerNote is a tool that enables providers to use structured templates for the documentation of a visit.

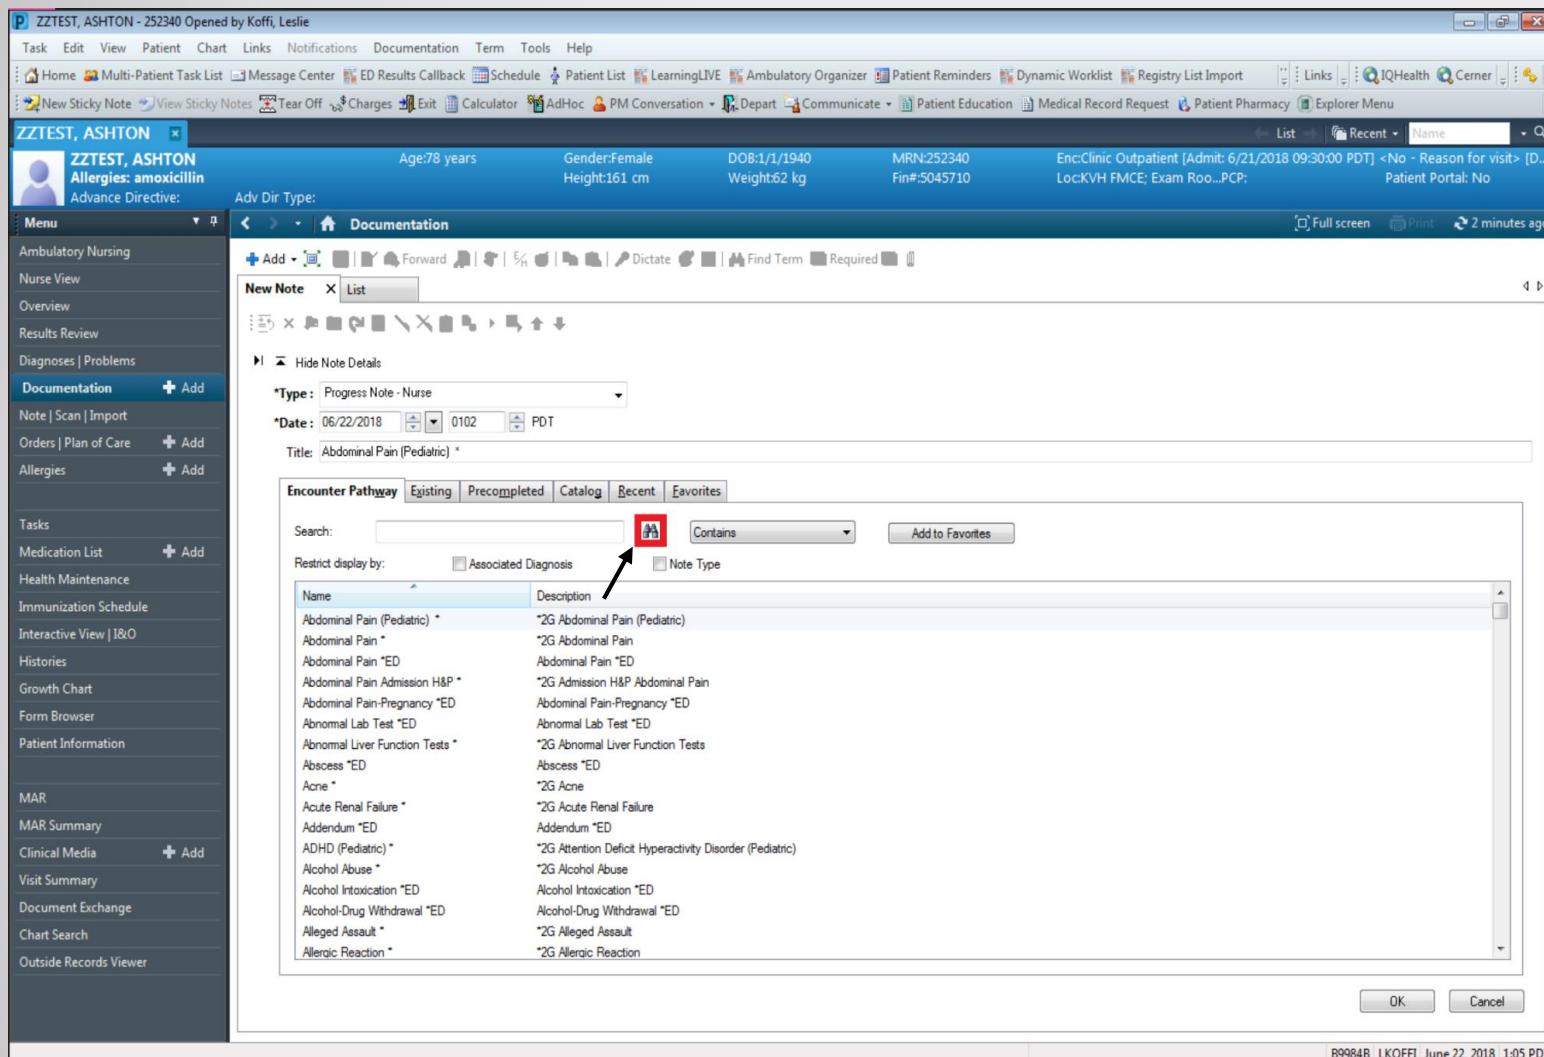

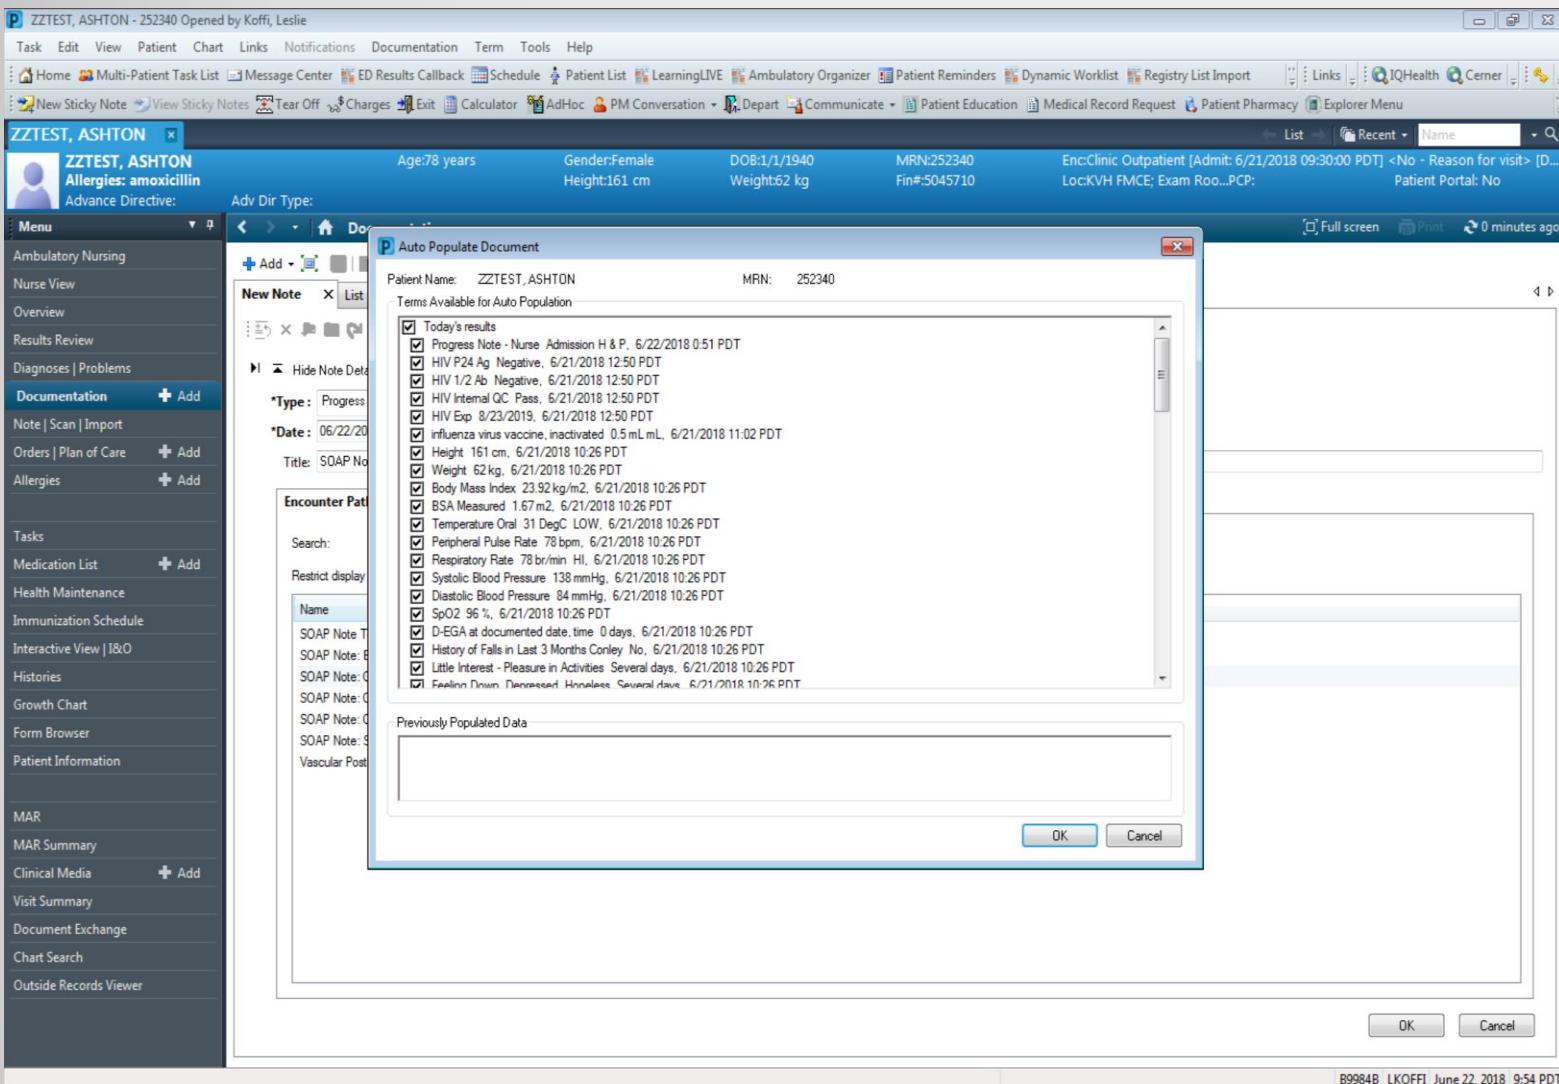

Encounter Pathway

Each template represents an Encounter Pathway. This could be the reason for visit, chief complaint, specific symptom, type of visit, procedure, or a template that allow you to build your own note.

Encounter Pathway

Documenting the visit/encounter using PowerNote can be done during the interview and examination rather than dictating the information at a later time. Because the note is created as you click your choices, documenting is quick and easy. An Encounter Pathway based on the discrete symptom or complaint displays specific terms for documentation and examination.

Auto Populate Documentation

Every PowerNote template serves as a pattern or model for auto populated documentation. The note is structured where you even have the ability to select by checking or un-checking which items you'd like to populate in your note.

Add new sticky note for this patient

Benefits of PowerNote

- Auto-population of the patient's recorded chief complaint, allergies, current medications, chronic problems, history information, vital signs and measurements **pull directly** into the appropriate sections within the note.
- Paragraph Structure - Structure of the visit documentation according to paragraphs. The standard template paragraphs are:
 - Note Structure** - Each paragraph is comprised of sentences and terms. The content within each note template/encounter pathway is specific to that note.
 - Chart Components** - Interaction with the Allergies, Medication List, and Problem & Diagnosis List components.
 - Orders, Charges and Prescriptions** - Integration with the Orders/Charges and Prescriptions for the Impression & Plan.
 - Macros and Pre-Completed Notes** - Features Macros and Pre-Completed notes (to be created by individual provider users), help to maximize patient documentation efficiency.

Sign, Save, Save Close, Cancel

Sign indicates that a note is being finalized.

Save indicates you'd like to view, modify or add more info later.

Save & Close indicates you'd like to view, modify or add more info later and close the document.

Cancel indicates that you would like to discard the document.

Clinical Note

Clinical Notes document the patient's encounter and creates an electronic record of that encounter. In the left menu below the Documentation tab, **Notes | Scan | Import** contains Clinical Notes that transcribed all documents and scanned documents as well as nursing and ancillary documentation.

Progress Note

Progress Notes are the part of a medical record where providers, nurses and medical staff record details to document a patient's clinical status or achievements during the course of a hospitalization or over the course of outpatient care.

Progress Note

Record the patient's progress in the text box below and also indicate a subject name. This type of note allows you to free text or use manage auto text.

Note: Manage Auto Text will be covered in the next lesson.
